

# Paris Action-plan

## Team proposals

The current handed in proposals from the teams developed in Prague

## Feedback overview

In this feedback I will mainly focus on the future and will not spend too much effort reviewing the process of the days in Prague.

The first things I want to say that it was fascinating to work with you as a group, your energy and dedication.

My idea of the goal of this weekend is to make you a bit more familiar with the processes, values, complications, possibilities and responsibilities working in public spaces brings. I think this worked as it seems to be an eyeopener that brought both new potential to the group as also new questions.

As I mentioned to focus mainly on how what has been created can be developed and brought to Paris I do want to mention that the essence of creating a diversity of activists and insights being involved in an ongoing process of discovery was and is the essence of this kind of research. What this means is that the understanding of the process and finding your place, for every individual but also for the group, in how to work in this context was the main goal. However during this brief investigation a great deal of workable content has been created and in my understanding also a master plan for the Paris action.

### My proposal for the Paris action

This proposal is built out of all the elements that were already set or have been created by you in Prague and is not in any way a new idea.

### General Idea

What happened in Prague was that three groups, existing of people with a variety of skills, created a diverse range of experiments from sincere interviews to a provoking action and engaging and animating the public in gaming. It is exactly this diversity that is where the quality of you as a group starts to connect with the content relating to the understanding of the "European" in all its diversity.

Imagine Gare du Nord as a place where this diversity can be felt, how do you as a group tap in to this. The only way to do this is also having a diverse approaches that appeal to a variety of people.

### Island Europe

Lets start with the idea (technical prescription) of a central island at Gare du Nord. Especially as this diversity of ideas and investigations is a quality, there needs to be a place of origin where a clear message can be communicated. This island can be the basis, the root of all experiments where a couple of objects create a setting that visualises your ideas around Europe and living in Europe. This for example is the perfect setting for the Bleu team to operate.

### Playing Europe

From here we move to the Yellow team that created a great idea about how to inform people about their connection to Europe.

### Choosing Europe

The Bleu team in this whole focussed on having people make choices. Making choices through standing or walking in a certain way. A non vocal communication and support for people to become aware of a choice they are facing and take a stand.

### Europe

All together these events / actions and situations created give a great energy to Gare du Nord. What they also do is appeal to a big audience, but still form a big picture to communicate a clear message to the media.

### What to pay attention to:

Value what you have created, don't jump to quickly to a new idea, but try to go in depth. The quality of an action does not lie in its idea, but in its development.

- Process  
This means that the process is still the most important. But how can the process of continuous research and experiment can keep having a central role in the preparation for Paris?

- Content  
The most confusing part of the Prague meeting was the absence of content. What is necessary is that the groups (the network) starts to create its own content, message, in this way you can operate as a group in any situation without losing why you are there and who you are

The experiment in the proposed action is in creating the right setting. How can you create a setting that on a fixed location, but still is flexible and can fit everyone's needs of feel comfortable.

- What is it that people need to feel comfortable?
- What reason would people have to take place in your setting?
- If you want to make people feel comfortable, what role do you give yourself in this situation?

Qualities of this proposal

- Valuing the simplicity of asking a question
- Support the rest of the interactions as a solid basis where a sincere conversation can take place.

What to work on

- What is the topic of the conversation?
- Can you create a topic that is also, like the situation you want to create is comfortable and perhaps from there leads into ...

### Green Team

**What is the Action about? (How does it work?)**

- Friendly conversation
- Share a moment
- Positive experience
- Giving something

**Why do you want to do this interaction?**

- To get as many points of views as possible on European issues
- Natural interest in opinions
- Natural interest in feelings
- Making people aware of the richness of their European life

**What do you want to learn?**

- How to successfully approach people
- How to address European issues without naming them European

**How would you see this interaction developed in Paris?**

- Build a more cozy place
- Invite people more to come
- Offer a valuable conversation
- Offer possibility to exchange on European citizenship, Europe today, European identity + things that come up
- Paper boats
- Message in the bottle
- Living room

Through experimentation team Blue found out that a gentle action more suits their personal needs and values.

Creating a game is a great invention to engage with the public that allows to both create a time to talk to people for a reason and creates place and context for this to happen.

### Yellow Team

THE EuroCzech-In

**What is the action about?**  
The idea is to get passers-by to play a EuroCzech-In, which is a kind of Eurobarometer expressed as a "snakes and ladders" game. Passers-by start on box 1 and answer a simple question about European identity. If they answer "yes" they progress through the game, if they say no they "snake" out of the game. The more they progress through the game, the more they show to share European values and the idea of a united Europe. Depending on their position on the board, their Europeanness is ranked into the following levels corresponding to their profile: Euroskeptic, Europlastic, Europositiv, Euroenthusiast, Eurolover, True European. They receive a description of their profile and are invited to engage in conversations about their answers.

**Why do you want to do this interaction?**

It is a fun way to build a sustainable social interaction with people in order to make them reflect on Europe. Purpose is to have them learn that even when they do not think they have European values, they still possess varying degrees of belief in Europe. An advantage of this game is that you don't have to approach people and "stress" them with questions about Europe. On the contrary, it brings people to you and makes them eager to ask questions.

**What did you learn?**

People are easy to be involved in such an activity if you manage to make them curious about it. They are also willing to engage in conversations and express their opinion if they are provided the right platform to do that. People from outside the European Union and living here tend to be more positive about the European project than Europeans themselves.

**How would you see this interaction developed in Paris?**

Similar game, with clearer and precise questions and a better design (meaning better "game board") follow-up interviews by other people of the team video documentation provide instructions so that people can also play independently create a more comfortable setting for post-game conversations like demonstrations by the team now and then to attract attention of the passer-bys

What to work on

- Like you mentioned yourself, the design of the game that would allow easy set-up and lay-out in a new environment and still allows to experiment with the location?
- Integration with the environment. Try to develop the game in a way that the questions are also connected to the position and physical experience of the game?

- How can the game become a natural part of a space, how can people play the game without having to hear the whole story?

- What is the value of the game elements in the space where the game is not being played?

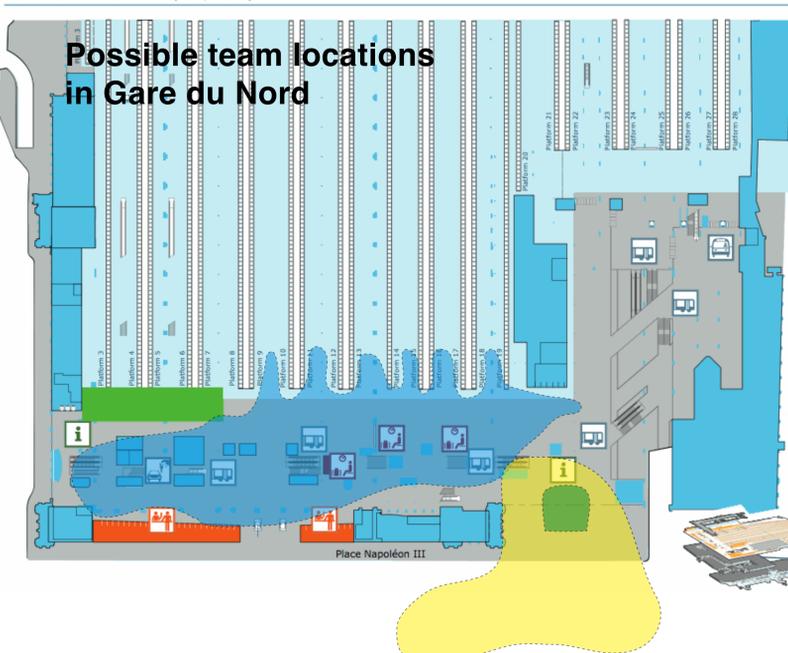

- What do people get for taking part. Is the game also a sort of exam for which you get a diploma, or is more like a journey for which you get a memory of Europe? Or ...

- What was missing was perhaps a good coordination of the team talking people through the game. Also her the question, who are you while you are putting up this act?

- Where would it take place in Gare du Nord, Outside, or somewhere inside?

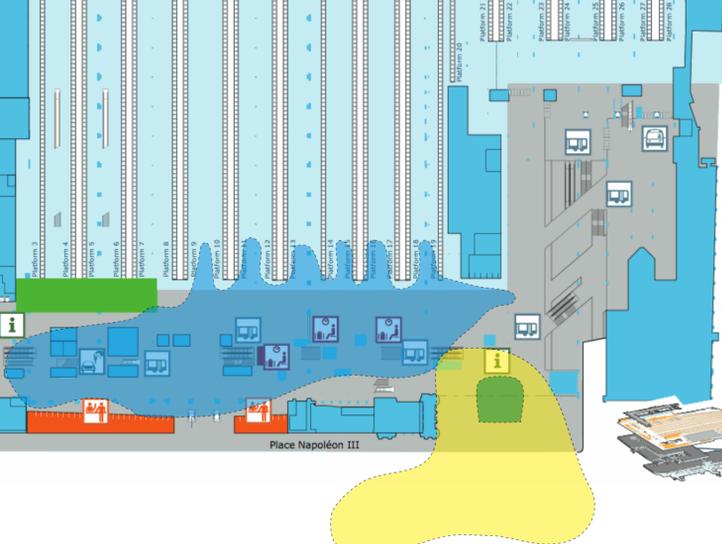

- Is it possible to develop a mobile version that can be played on the move, while the team provides the context for people to respond to?

## Paris Gare du Nord (Paris, France)

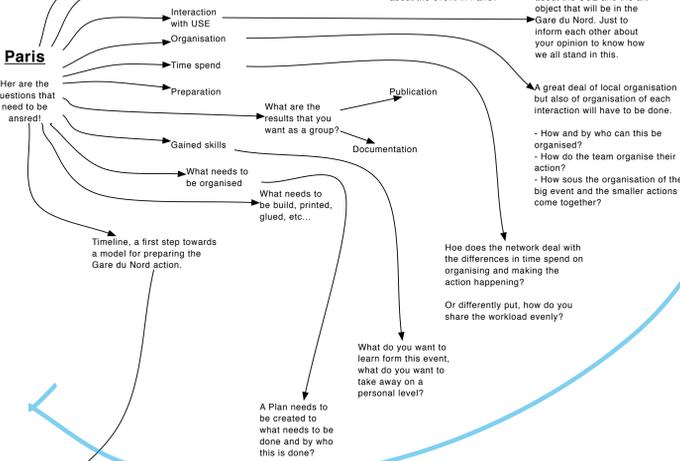

- Info point
- Waiting areas
- International platforms
- International ticket offices
- Buses
- Subways
- Car rental
- www.raileteam.eu

## Possible team locations in Gare du Nord

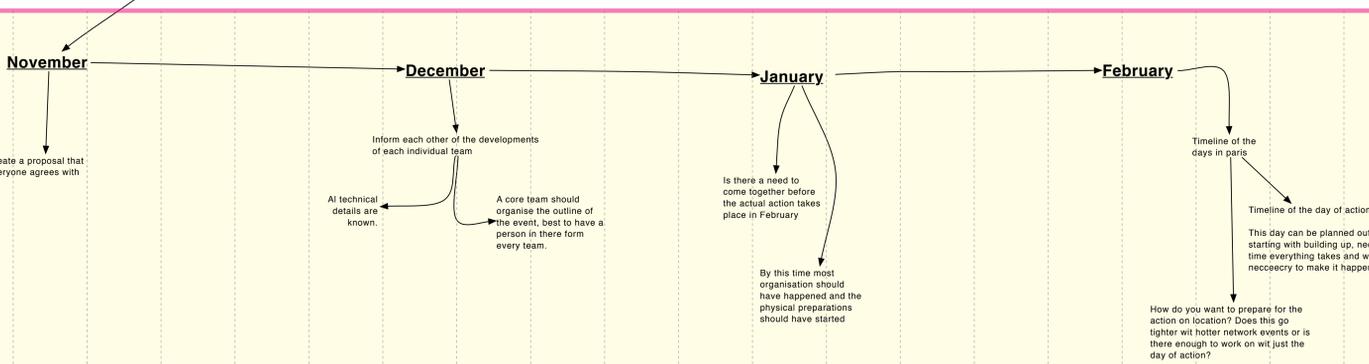

## Designing Interactions in Public space at Gare du Nord

## Preparing for Paris

## Questions for the Network

## Timeframe

### November

### December

### January

### February

Create a proposal that everyone agrees with

Inform each other of the developments of each individual team

A core team should organise the outline of the event, best to have a person in there form every team

Timeline of the days in Paris

Timeline of the day of action

This day can be planned out, starting with building up, needs, time everything takes and what is necessary to make it happen

Al technical details are known.

By this time most organisation should have happened and the physical preparations should have started

Is there a need to come together before the actual action takes place in February

How do you want to prepare for the action on location? Does this go together with other network events or is there enough to work on wit just the day of action?

What do you want to learn from this event, what do you want to take away on a personal level?

How does the network deal with the differences in time spend on organising and making the action happening?

Or differently put, how do you share the workload evenly?

What are the results that you want as a group?

What are the results that you want as a group?

How can you decide on a communal topic as a leading question for the event apart from the USE network?

The actions that each group has worked on make a great combination but is everyone still enthusiastic about the event in Paris?

How does everyone feel about the USE and the art object that will be in the Gare du Nord. Just to inform each other about your opinion to know how we all stand in this.

A great deal of local organisation but also of organisation of each interaction will have to be done.

A great deal of local organisation but also of organisation of each interaction will have to be done.

- How and by who can this be organised?

- How do the team organise their action?

- How sours the organisation of the big event and the smaller actions come together?

- What are you looking for, quantitative results of people choosing or creating a scene around the question, a real performance.

- What are you looking for, quantitative results of people choosing or creating a scene around the question, a real performance.

- Desing the tools better. If you are using a body to make people make choices

- Choose the locations more carefully, you mentioned blocking the stream is not working so where sours it work and how can think about what you need to make the question (content) and the way of asking the question are line.

- Be creative in what way you can make people make choices. Instead of left right a choice can e.g. also be made through claiming "If you stand here you are a..."

- Instead of asking one question can you develop a series of questions that give you an insight over the day.

- Instead of asking one question can you develop a series of questions that give you an insight over the day.

- Don't take the questions to serious, its good to pose important questions, but how can you make them more fun, less heavy. Its about having a good time there too and making people laugh often has a greater impact. How can all this framed differently.

- Simplify the questions and the setting even more.

- What are you looking for, quantitative results of people choosing or creating a scene around the question, a real performance.

- Desing the tools better. If you are using a body to make people make choices

- Desing the tools better. If you are using a body to make people make choices

- Choices about Europe made by the people walking through the train station.

The qualities in this proposal

- Do not shift your idea to much, in this way your starting something else instead of developing your idea into a workable method. You have a great experiment with many qualities. Please do not go into creating new ideas but use the things you have learned to make an intelligent and engaging mobile experience in the station.

What to work on

What to work on

- The body as a tool in this context is a nice metaphor and usually works well.

- It feels like a very playful and flexible approach that can really use the station and play with all the corners the space has to offer with our obstructing or annoying anyone.

- Playful way to talk about Europe in consumable steps.

- Where would it take place in Gare du Nord, Outside, or somewhere inside?

- Where would it take place in Gare du Nord, Outside, or somewhere inside?

- Is it possible to develop a mobile version that can be played on the move, while the team provides the context for people to respond to?
